

## Stream mini-beasts Recording sheet

Name of mini-beast	Adaptation to flowing water

### Adaptations to living in flowing water

In rivers and streams mini-beasts need to find ways to stop them getting swept away by the current. Adaptations include:

- Hide under stones so that they are not swept away.
- Flattened bodies so they are less likely to be swept away.
- Streamlined bodies to help them swim against the current.
- Glue their homes to the rocks.
- Spin nets to hold them to the rocks
